

EASTERN HEALTH 2022

THE STRATEGIC CLINICAL SERVICE PLAN 2012–22

PETER JAMES CENTRE

Peter James Centre will provide inpatient, outpatient and ambulatory healthcare services that will include rehabilitation, geriatric medicine, renal dialysis, post acute care and residential care.

Managing accessibility of health services for our communities is inextricably linked with our ability to move patients to the most appropriate facility with the appropriate staff for their needs. Peter James Centre will become increasingly important for its role in providing Eastern Health with capacity to do this well.

Eastern Health 2022 recommends the following changes at Peter James Centre:

- ▶ Enhancing consultation services, including cardiology, rheumatology, pain management and endocrinology (diabetes) services
- ▶ Moving acute aged persons mental health services
- ▶ Progressing capital redevelopment to support the change in clinical services
- ▶ Enhancing the capacity of the site to meet the rising acuity needs of patients and the associated investigative allied health and other services that are required to support the increased acuity
- ▶ Exploring the expansion of allied health and other clinical support services, including pathology and medical imaging services, in recognition of the expanding service profile, increasing acuity and complexity of patients at this site.
