

EASTERN HEALTH 2022

THE STRATEGIC CLINICAL SERVICE PLAN 2012–22

WANTIRNA HEALTH

Wantirna Health will support inpatient and outpatient healthcare needs across clinical services that include geriatric evaluation and medicine, palliative care and rehabilitation.

Due to its central location within Eastern Health's primary catchment area and available land around it, the site is considered to be most suitable for future accommodation of planned, short cycle streams of care and chronic disease (ambulatory) streams of care when it is not possible to deliver these services in the home or community.

Eastern Health 2022 recommends the following changes at Wantirna Health:

- ▶ Increasing inpatient acute geriatric medicine services
- ▶ Establishing an Eastern Health centre for chronic disease management
- ▶ Developing an Eastern Health centre for education and research
- ▶ Progressing capital redevelopments to support the expanding service profile
- ▶ Exploring the expansion of clinical support services, including pathology and medical imaging services, in recognition of the expanding service profile, acuity and complexity of patients at this site
- ▶ Working in partnership with others to improve public transport and future parking provisions at the site
